

Unlock environmental opportunities in your dairy production

The climate smart feed additive Agolin Ruminant is ideal for boosting your business

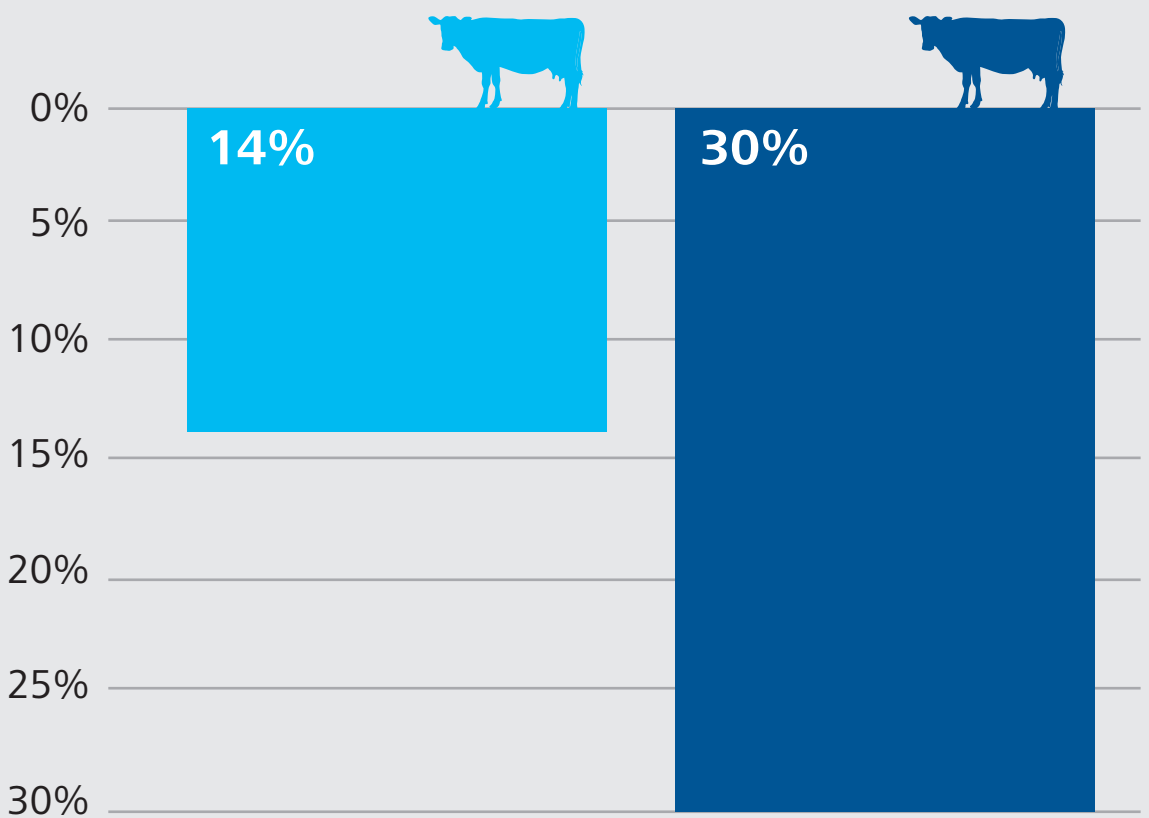

- Help farmers in your supply chain increase the feed efficiency of their dairy cows and save money
- Reduce greenhouse gas emissions along your supply chain
- Improve the brand image of your milk and increase sales

Agolin Ruminant: A Climate Smart Feed Additive

Our research results

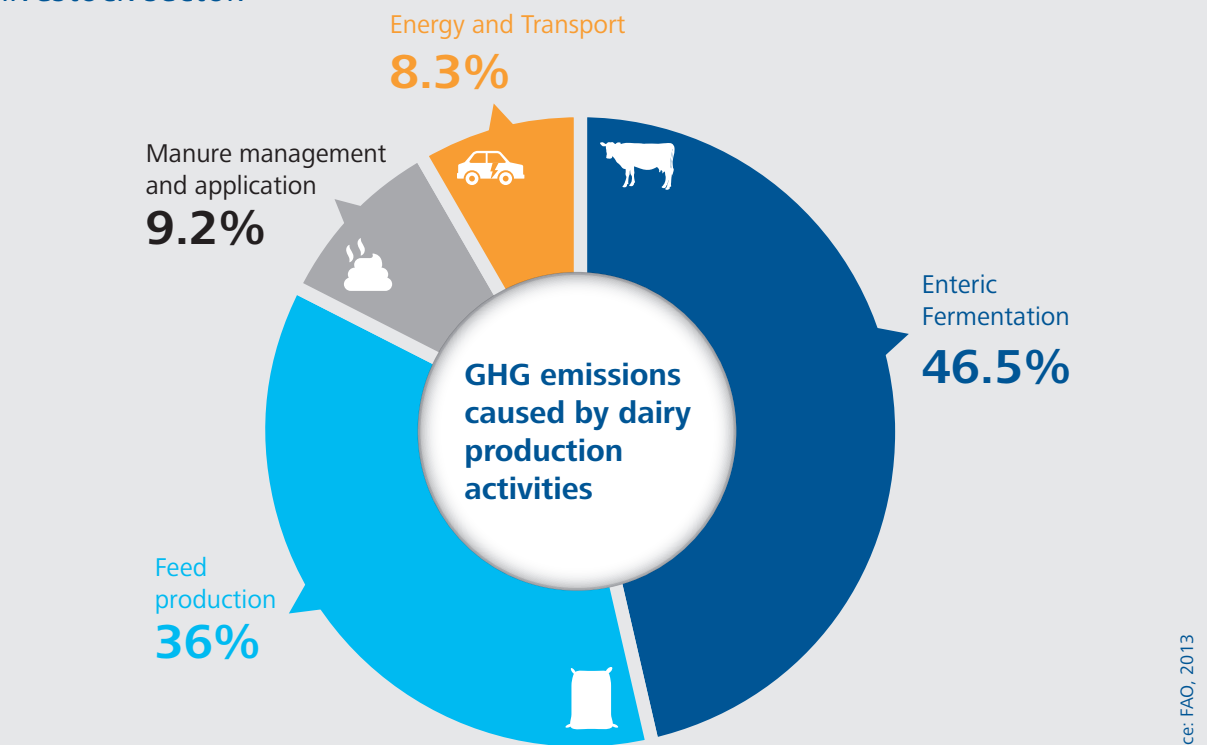

A peer-reviewed study, published by Livestock Science in 2015, show that Agolin Ruminant can reduce absolute methane emissions by 14-30% per cow per day.*

*Additional studies on the effectiveness of Agolin Ruminant are currently being conducted.

Dairy footprint

Dairy production is the second largest contributor to GHG emissions in the livestock sector.

Frequently asked questions

What is Agolin Ruminant made of?

It is a blend of high quality plant extracts from e.g. coriander, nutmeg or wild carrot.

Is the feed additive safe? Yes.

The quality standards of Agolin SA ensure product safety. Agolin Ruminant complies with the EU regulation (EC) 1831/2003 on feed additives. Moreover, all flavour ingredients contained in Agolin Ruminant are FDA approved.

Is there any negative impact on taste and quality of the milk? No.

So far, Agolin does not have any negative effect on the taste and quality of the milk or the health of the animals. Analyses show no trace of Agolin in the milk.

Does it have a negative impact on feed consumption or milk productivity? No.

Agolin has shown to enhance feed conversion and increase milk production.

What are the costs?

Agolin improves feed digestion, meaning that more food is converted into energy. This enables you to save money.
