Corporate demand for renewable energy is growing. Many corporates employ a mix of the available renewable solutions to secure affordable power, hedge against risks, and deliver environmental and social impacts. Employing the right mix requires an understanding of the risks and benefits of these various solutions in different market contexts.

An independent consultant with a global presence, South Pole has supported over 100 corporate clients to develop global renewable energy procurement strategies and solutions. We can help you to:

→ **Define**

Define global strategy for your interim and long-term goals and the best mechanism for each of your facilities to reach global targets

→ **Execute**

Execute the agreed strategy through our expertise and global network of Environmental Attribute Certificate (EAC) project owners, corporate Power Purchase Agreement (PPA) counterparts and developers

→ **Monitor**

Monitor and report your renewable energy sourcing progress

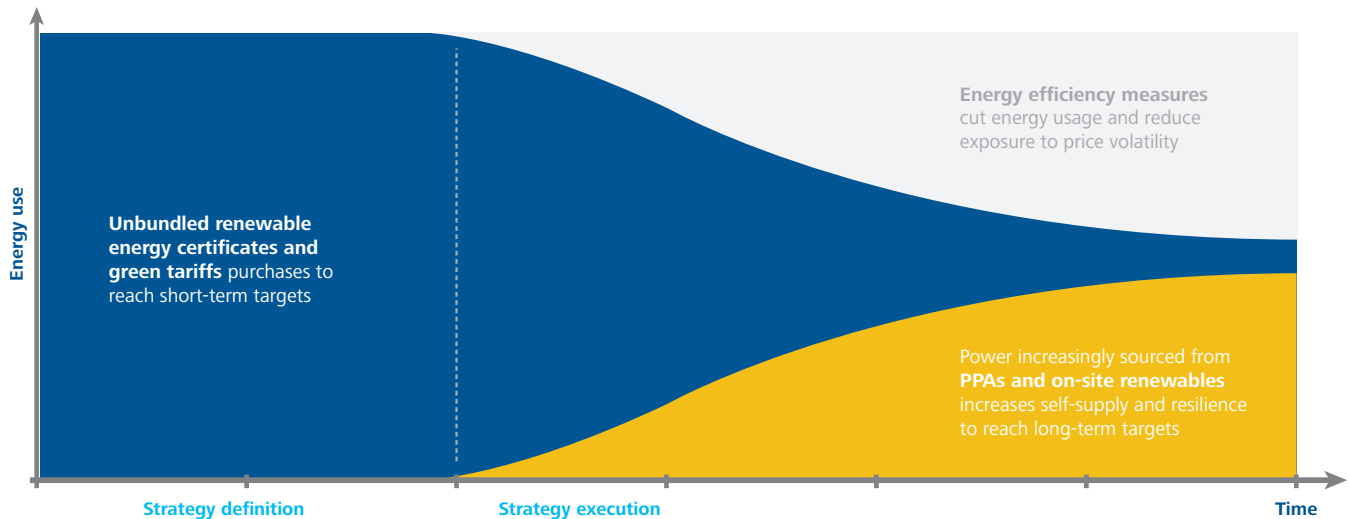

A selection of our renewable energy clients

Designing and delivering on your renewable energy roadmap

We help clients address the challenges and grasp the opportunities of renewable energy procurement. Our strategy development often centres on PPA and on-site generation options in the long-term and medium-term and using green tariffs and renewable energy certificates to meet interim targets and for accounting purposes. It delivers local procurement plans tailored to each country and region, coordinating them with your global strategy to ensure you achieve your long-term climate and carbon objectives, whilst ensuring cost efficiencies and managing risks.

Executing your renewable energy strategy

We help clients in a variety of ways

Green Tariffs

- Analyse current green tariff procurement
- Optimise in terms of price, quality and solution type
- Switch to more attractive solution (e.g. EACs)

EACs

- Define evaluation criteria
- Manage entire RfP process
- Secure most attractive terms

Corporate PPAs

- Define evaluation criteria
- Manage entire RfP process
- Risk management, PPA structuring and negotiation

On-Site Renewables

- Technical and financial feasibility across portfolio
- RfP process for suitable and prioritised facilities
- Third-party financing arrangements

Local knowledge, global presence

Our clients benefit from the practical experience of our team of 300+ experts in countries across Africa, Asia, Europe, North and South America working on 700+ emissions reduction and renewable energy projects. Our deep local knowledge and global reach allows us to tailor solutions to your needs.
