

CAPARISPISAN WIND PHILIPPINES

Improving energy security in the Philippines

The Philippines is heavily reliant on fossil fuels for its energy, primarily from the burning of coal. This project located on the northern tip of the country, in the resort area of Ilocos Norte, consists of 27 wind turbines producing clean energy and demonstrating the viability of renewable energy across the region.

Helping the Philippines achieve energy independence and a cleaner future.

The Philippines is a country experiencing economic growth amongst the fastest countries in Asia. This economic growth has led to an increasing demand for reliable energy. Historically this demand has predominantly been met through the burning of fossil fuels such as coal and oil.

Compounding the usual problems with the use of fossil fuels, the Philippines is heavily reliant on purchasing and importing large volumes of oil and coal to service its energy demands, a process which is inefficient and expensive.

This wind farm located in the picturesque coastal resort town of Pagudpud, Ilocos Norte on the northern tip of Luzon not only helps to reduce the reliance on heavily polluting fossil fuels but also helps the country towards energy independence.

PROJECT HIGHLIGHTS

276,941
MWh electricity generated per year

DECENT WORK
Permanent jobs created

153,286
tCO₂e mitigated per year

CHECKLIST PROJECT

Commercial Operation Date

11 July 2013

Total capacity

81 MWe

Quality Assurance and Verification

Annual audit of GoldPower Accounting and Reporting Policy provided by RSM
Annual electricity verified by TÜV Rheinland

Transparency

RECs listed in GoldPower Register
Underpinning carbon credits retired in Gold Standard Markit Registry

Marketing material

High-resolution pictures available

Reportability

Meets GHG Protocol criteria

GoldPower credentials projects certified by

Gold Standard

GoldPower credentials reportable under

#READYFOR2020
