

intercharge *green*

A solution for Emobility Service Providers
EV power from 100% renewable energies

HUBJect
connecting emobility networks

 **south pole**
group

intercharge *green*

Offer EV drivers the option to charge their vehicles with 100% green energy. intercharge *green* gives your customers of EV charging services the certainty that the entire amount of charging electricity has been produced regeneratively while adhering to the highest ecological requirements.

You and your EV drivers can actively contribute to the promotion of renewable energies with the purchase of the intercharge *green* certificate. intercharge *green* relies on environmentally friendly energy from a Swiss hydroelectric power plant.

**100%
RENEWABLE
ENERGY**

INTERCHARGE *GREEN* – YOUR GUARANTEE FOR CERTIFIED
EV POWER FROM 100% RENEWABLE ENERGIES

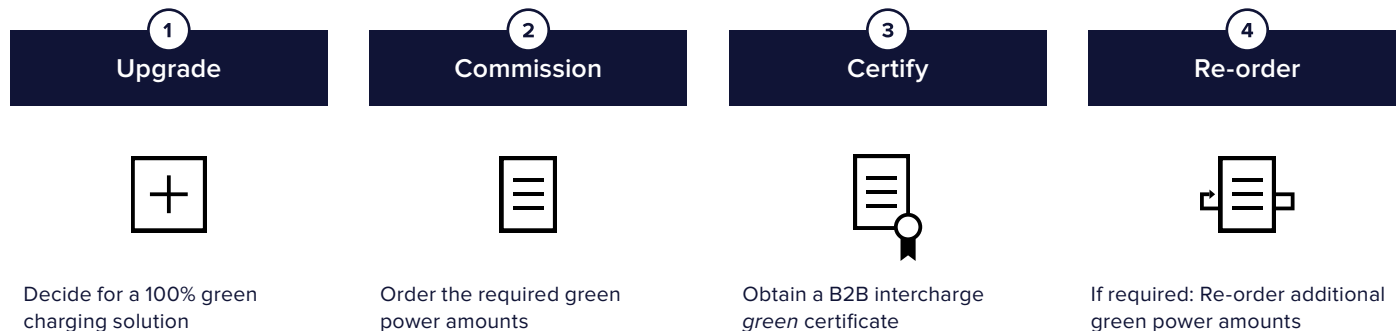

Your benefits

- Upgrading of your charging solution to a fully sustainable EV power product
- Suitability for different customer groups (e.g. vehicle fleets or private vehicles)
- Integration in your own sustainability strategy
- Image gain on account of promoting regenerative power

Our services

- Guarantee for EV power from 100% ecological generating plants
- Validation of green power proof-of-origin certificates according to European standards
- Support for determining required green power amounts
- Annual issuance of a certificate for the purchase of green power
- Upon request: Provision of intercharge *green* vignettes as a visual identification mark for customers

How to get intercharge *green*

HYDROELECTRIC POWER PLANT PALÜ IN THE SWISS ALPS

WHAT IS GREEN POWER?

Green power refers to regeneratively produced energy. Green EV power is an important component of the sustainable energy supply and crucial for emission-free electric mobility.

GREEN POWER FROM HYDROPOWER

intercharge *green* electricity is sourced from the hydroelectric power plant Palü in the Swiss Alps. The plant is a pilot project for determining the certification criteria for "naturemade star", the worldwide leading quality seal for the generation of environmentally friendly electricity and thus fulfills the highest ecological requirements.

GREEN POWER CERTIFICATION

You receive a personalised certificate for the usage of 100% renewable energy. Upon request, we provide intercharge *green* vignettes as a visual identification mark for your customers of EV charging services.

B2B price interchange *green*

intercharge *green*

1 € / 20 kWh

Kilowatt hour as reference value

Example: EV driver charges 2.000 kWh per year.
Price interchange *green* = 100 €

or

1 € / 100 km

Kilometres as reference value

Example: EV fleet drives 400.000 km per year.
Price interchange *green* = 4.000 €
